

Khush Admin — Feature Test Guide

Audience: Fellow developers / QA

Date: 24 Sep 2026

Scope: Support Room, Refunds (approval flow), Module Access, iOS static OTP, WhatsApp Meta template edit & review

0. Before you start

Services to restart / run

Service	Why
auth-service	iOS static OTP + module access catalog (support-room , refunds)
backend-service	Support APIs, refunds APIs, WhatsApp resubmit
api-gateway	Routes /api/admin/support , /api/admin/refunds
Khushadminpanel (Vite)	New pages / UI

Roles

Role	Access
admin	Full access (no module filter)
subadmin / super_subadmin	Only modules granted in Module Access

Module keys (assign under Module Access → Orders group)

Key	UI	APIs
order	Orders list / exchange / return / stale	/api/admin/orders
support-room	Orders → Support Room	/api/admin/support
refunds	Orders → Refunds	/api/admin/refunds

Tip: Support Room search needs **Orders** (view is enough) + **Support Room** (full to submit actions). Refund approve needs **Refunds** (full).

1. Navigation map

Admin sidebar

└─ Orders (dropdown)

- └─ Orders → /admin/orders [module: order]
- └─ Support Room → /admin/orders/support [module: support-room]
- └─ Refunds → /admin/orders/refunds [module: refunds]
- └─ Exchange orders → /admin/exchange-orders [module: order]
- └─ Return orders → /admin/return-orders [module: order]
- └─ Stale orders → /admin/orders/stale [module: order]

Notifications

- └─ WhatsApp templates → /admin/notifications/whatsapp-templates

Subadmin paths use /subadmin/... instead of /admin/...

2. Support Room — purpose & flow

Purpose

Ops/support opens a customer order case and runs actions (address, cancel, status, return, exchange, sync tracking, **refund request**) with a mandatory reason and audit log.

How to open

1. Sidebar → **Orders** → **Support Room**
2. Search box: order ID, phone, or name → **Search**
3. If multiple matches → click a row
4. If one match / exact order ID → case opens automatically
5. **Recent cases** chips reopen last opened orders (localStorage)

Case workspace layout

Area	What it does
Header	Order ID (copy), status, customer, payment mode
Left	Issue picker (Address, Cancel, Status, Return, Exchange, Sync, Send refund request)
Center	Action form for selected issue
Right / bottom	Support action history (audit)

Issue actions (buttons & purpose)

Issue	Main buttons	Purpose	Result
Wrong address / phone	Save	Patch shipping contact/address	Logged as address change
Cancel after processing	Select lines + policy reason + support reason → Submit	Cancel lines on behalf	Uses cancel-order policy
Status incorrectly set	Pick line + new status + reason → Submit	Correct bad status	Logged
Create return	Requested = create only; Schedule = create + approve + carrier pickup	Return on behalf	Same carrier flow as Orders
Create / fix exchange	Same Requested / Schedule pattern	Exchange on behalf	Same as Orders exchange
Sync courier tracking	Sync	Pull Delhivery / Shadowfax	Shiprocket = phase 2 note
Send refund request	Amount, destination, reason → Send refund request	Queue refund for approval	Does not pay money yet

Refund request destinations (in Support form)

Destination	Meaning
AUTO	Detect: Razorpay prepaid → RAZORPAY; else WALLET; Nimble → OTHER
RAZORPAY	Must have successful Razorpay <code>paymentId</code>
WALLET	Credit Khush Wallet (after approval)
OTHER	External payout; after approval → Mark done on Refunds tab

Expected toast after Send refund request

> “Refund request sent — approve it on Orders → Refunds to pay out”

Status in DB: **REQUESTED** (pending approval).

Pass criteria — Support Room

- ☐ Search finds order by ID / phone / name
- ☐ Case opens with lines, AWBs, payment info
- ☐ Each issue form requires a support reason
- ☐ Action appears in support history
- ☐ Refund request appears on **Refunds** tab as REQUESTED
- ☐ View-only `support-room` cannot submit actions
- ☐ Without `order` module, search is blocked with clear message

3. Refunds tab — purpose & flow

Purpose

Central queue for all support/admin refund requests. **Money moves only after Approve** (or Mark done for Other).

How to open

Sidebar → **Orders** → **Refunds**

Screen elements

Control	Purpose
Refresh	Reload list
Filters: Order ID / Status / Destination + Search	Narrow list
Counters	Pending / Done / Manual / Failed (current page)
Table columns	Created, Order, Amount, Channel, Status, Reason, Refs, Actions

Status meanings

Status	Meaning
REQUESTED	Waiting for Approve
PROCESSING	Payout in progress
COMPLETED	Paid (Razorpay / Wallet / marked Other)
FAILED	Approve tried; API/wallet failed — use Re-approve / Retry
NEEDS_MANUAL	Approved as Other — ops must pay outside, then Mark done
CANCELLED	Cancelled (if used)

Channel meanings

Channel	After Approve
RAZORPAY	Calls Razorpay refund API → <code>rfnd_...</code> in Refs
WALLET	Credits customer cash wallet
OTHER	No auto pay → NEEDS_MANUAL → Mark done

Action buttons

Button	When shown	What happens
Approve	REQUESTED	Confirm → Razorpay/Wallet process, or OTHER → NEEDS_MANUAL
Re-approve	FAILED	Retry approve + process
Retry	FAILED + Razorpay/Wallet	Process again
Mark done	OTHER + NEEDS_MANUAL	Prompt for note → COMPLETED

End-to-end test script (happy paths)

A) Razorpay auto refund

1. Open a **prepaid SUCCESS Razorpay** order in Support Room
2. Issue → Send refund request → amount small (e.g. ₹1–3) → destination AUTO or RAZORPAY → reason → Send
3. Go to **Refunds** → row status **REQUESTED**, channel **RAZORPAY**

4. Click **Approve** → confirm
5. Expect **COMPLETED**, Refs show `rz: rfnd_...` and `pay: pay_...`

B) Wallet auto refund

1. Use **COD** (or non-Razorpay) order
2. Send refund → AUTO/WALLET
3. Approve on Refunds
4. Expect **COMPLETED**, channel **WALLET**, wallet tx id in Refs
5. Optionally verify customer wallet transactions (`transaction_source: REFUND`)

C) Other source (manual)

1. Send refund with destination **OTHER**
2. Approve → status **NEEDS_MANUAL**
3. Ops pays outside (UPI/bank)
4. **Mark done** + optional note → **COMPLETED**

Pass criteria — Refunds

- ☐ Support request always lands as REQUESTED (no instant payout)
- ☐ Approve is required before Razorpay/Wallet call
- ☐ Failed rows can be re-tried
- ☐ View-only `refunds` cannot Approve / Mark done
- ☐ Subadmin without `refunds` gets Access denied on `/orders/refunds`

4. Module Access — how to grant & test

Where

Admin → Module Access (role: subadmin / super_subadmin) **or** per-user module override if your panel supports it.

Grant checklist for a “Support agent”

- ☐ `order` — **view** (search/open orders)
- ☐ `support-room` — **full** (submit actions + refund request)
- ☐ `refunds` — **full** if they should approve payouts; **view** if only browse

Grant checklist for “Refunds ops only”

- ☐ `refunds` — **full**
- ☐ (optional) `order` — view, to jump to order from table link

UI checks after grant

- ☐ Sidebar shows only allowed Orders children
- ☐ Direct URL without module → Access denied
- ☐ View-only shows gold banner; mutating buttons disabled / blocked

5. iOS static OTP (App Store review login)

Purpose

Apple reviewers log in without SMS using a fixed phone + OTP.

Credentials (from auth-service `.env` / defaults)

Field	Value
Phone	9988776655 (or APPLE_REVIEW_PHONE)
OTP	567894 (or APPLE_REVIEW_OTP)
Flag	APPLE_REVIEW_OTP_ENABLED=true

Flow

1. App / web login with phone **9988776655** (+91 ok)
2. Request OTP → API returns success **without SMS**
3. Enter OTP **567894** → login succeeds
4. User auto-created as “Apple Review” if missing

Pass criteria

- ☐ Works with 9988776655 , +919988776655 , spaced formats
- ☐ Wrong OTP fails
- ☐ Other phones still use real 2Factor SMS
- ☐ Restart auth-service after env change

6. WhatsApp Meta templates — edit & send for review

Purpose

Configure template mapping **and** edit Meta body/header/footer/buttons, then **resubmit to Meta** for approval.

How to open

Notifications → **WhatsApp templates**

Create new (already worked)

1. **Create template** → fill name, category, body (`{{1}}` vars), header/footer/buttons
2. **Submit to Meta** → status **PENDING**

Configure existing (fixed)

1. Row → configure (gear / Configure)
2. If status **REJECTED / PAUSED / DISABLED / APPROVED**:
 - Meta fields are **editable**
 - Amber hint explains review flow
 - 1. Buttons:
 - **Save configuration** — local mapping only (module, events, variable keys)

- **Save & send for review** — POST edit to Meta → status **PENDING**

1. If status **PENDING**: Meta content locked; mapping still editable

Pass criteria

- ☐ Rejected template: can edit body and click **Save & send for review**
- ☐ Success toast: sent for review / PENDING
- ☐ Sync from Meta updates status after Meta decides
- ☐ PENDING cannot edit Meta body (by design)

7. API cheat sheet (for Postman / debugging)

Base via gateway: `/api/...` with admin JWT.

Method	Path	Purpose
GET	<code>/admin/support/orders/:orderId/actions</code>	Support history
POST	<code>/admin/support/orders/:orderId/refunds</code>	Create refund request (queued)
GET	<code>/admin/refunds?status=&orderId=</code>	List refund requests
POST	<code>/admin/refunds/:id/approve</code>	Approve → process
POST	<code>/admin/refunds/:id/process</code>	Retry process
POST	<code>/admin/refunds/:id/mark-manual-complete</code>	Other source done
POST	<code>/admin/notification/whatsapp/templates/:id/resubmit</code>	Meta edit + review
POST	<code>/user/auth/login</code> then verify OTP	iOS static OTP path

Exact notification admin prefix may be `/api/admin/notification/...` — match existing Postman collection.

8. Suggested smoke test order (30–40 min)

1. Admin login → see Support Room + Refunds under Orders
2. Support Room → open known Razorpay order → send ₹1–3 refund AUTO
3. Refunds → Approve → COMPLETED + `refund_`
4. Support Room → COD order → wallet refund → Approve → wallet credit
5. Support Room → OTHER refund → Approve → Mark done
6. Module Access: subadmin with only `support-room` + `order` view — can request refund, cannot open Refunds approve
7. Subadmin with `refunds` full — can Approve
8. Login as Apple Review phone + OTP `567894`
9. WhatsApp: open REJECTED template → edit → Save & send for review

9. Common failures

Symptom	Likely cause
Support APIs 404	Gateway missing <code>/api/admin/support</code> or backend not restarted

Symptom	Likely cause
Refunds list empty / 404	Gateway missing <code>/api/admin/refunds</code>
Approve fails Razorpay	No <code>paymentId</code> , amount < ₹1, or Razorpay keys / TLS
Search blocked	Missing <code>order</code> module
Cannot Approve	View-only <code>refunds</code> or wrong role
WhatsApp resubmit error	Missing <code>metaTemplateId</code> — Sync from Meta first
iOS OTP invalid	Wrong phone digits / OTP / auth-service not restarted

10. Change log (what landed)

1. Support Room under Orders + case actions + refund request issue
2. Refunds tab with **Approve-then-payout** (Razorpay / Wallet / Other)
3. Module Access keys: `support-room` , `refunds`
4. iOS static OTP hardening (phone normalize)
5. WhatsApp Meta: editable configure + **Save & send for review**
6. UI aligned to shared admin tokens (`PageToolBar` , `border-border` , `brand-600`)
